fingerprint-pipeline

» Required field

Freestyle project

This is the central feature of Jenkins. Jenkins will build your project, combining any SCM with any build system, and this can be even used for something other than software build.

Pipeline

Orchestrates long-running activities that can span multiple build agents. Suitable for building pipelines (formerly known as workflows) and/or organizing complex activities that do not easily fit in free-style job type.

Multi-configuration project

Suitable for projects that need a large number of different configurations, such as testing on multiple environments, platform-specific builds, etc.

Folder

Creates a container that stores nested items in it. Useful for grouping things together. Unlike view, which is just a filter, a folder creates a separate namespace, so you can have multiple things of the same name as long as they are in different folders.

GitHub Organization

Scans a GitHub organization (or user account) for all repositories matching some defined markers.

Multibranch Pipeline

Creates a set of Pipeline projects according to detected branches in one SCM repository.

Pipeline

Definition

Pipeline script

Script

```
1 pipeline {
2   agent any
3   stages{
4     stage('Build') {
5       steps{
6         sh 'echo "We are generating text artifacts: Build:${BUILD_NUMBER}" > output.txt'
7       }
8     }
9     stage('Archive') {
10      steps {
11        archiveArtifacts artifacts: 'output.txt', fingerprint: true, onlyIfSuccessful: true
12      }
13    }
14  }
15 }
```

try sample Pipeline... ?

☒ Use Groovy Sandbox ?
