tag

Policy Definitions (16)

Enforce tag on resource

Custom

This policy will enforce the existence of a tag in a resource.

Require a tag and its value on resources

Built-in

Enforces a required tag and its value. Does not apply to resource groups.

Append a tag and its value to resources

Built-in

Appends the specified tag and value when any resource which is missing this tag is created or updated. Does not modify the tags of resources created before this policy was applied until those resources are changed. Does not apply to resource groups. New 'modify' effect policies are available that support remediation of tags on existing resources (see https://aka.ms/modifydoc).

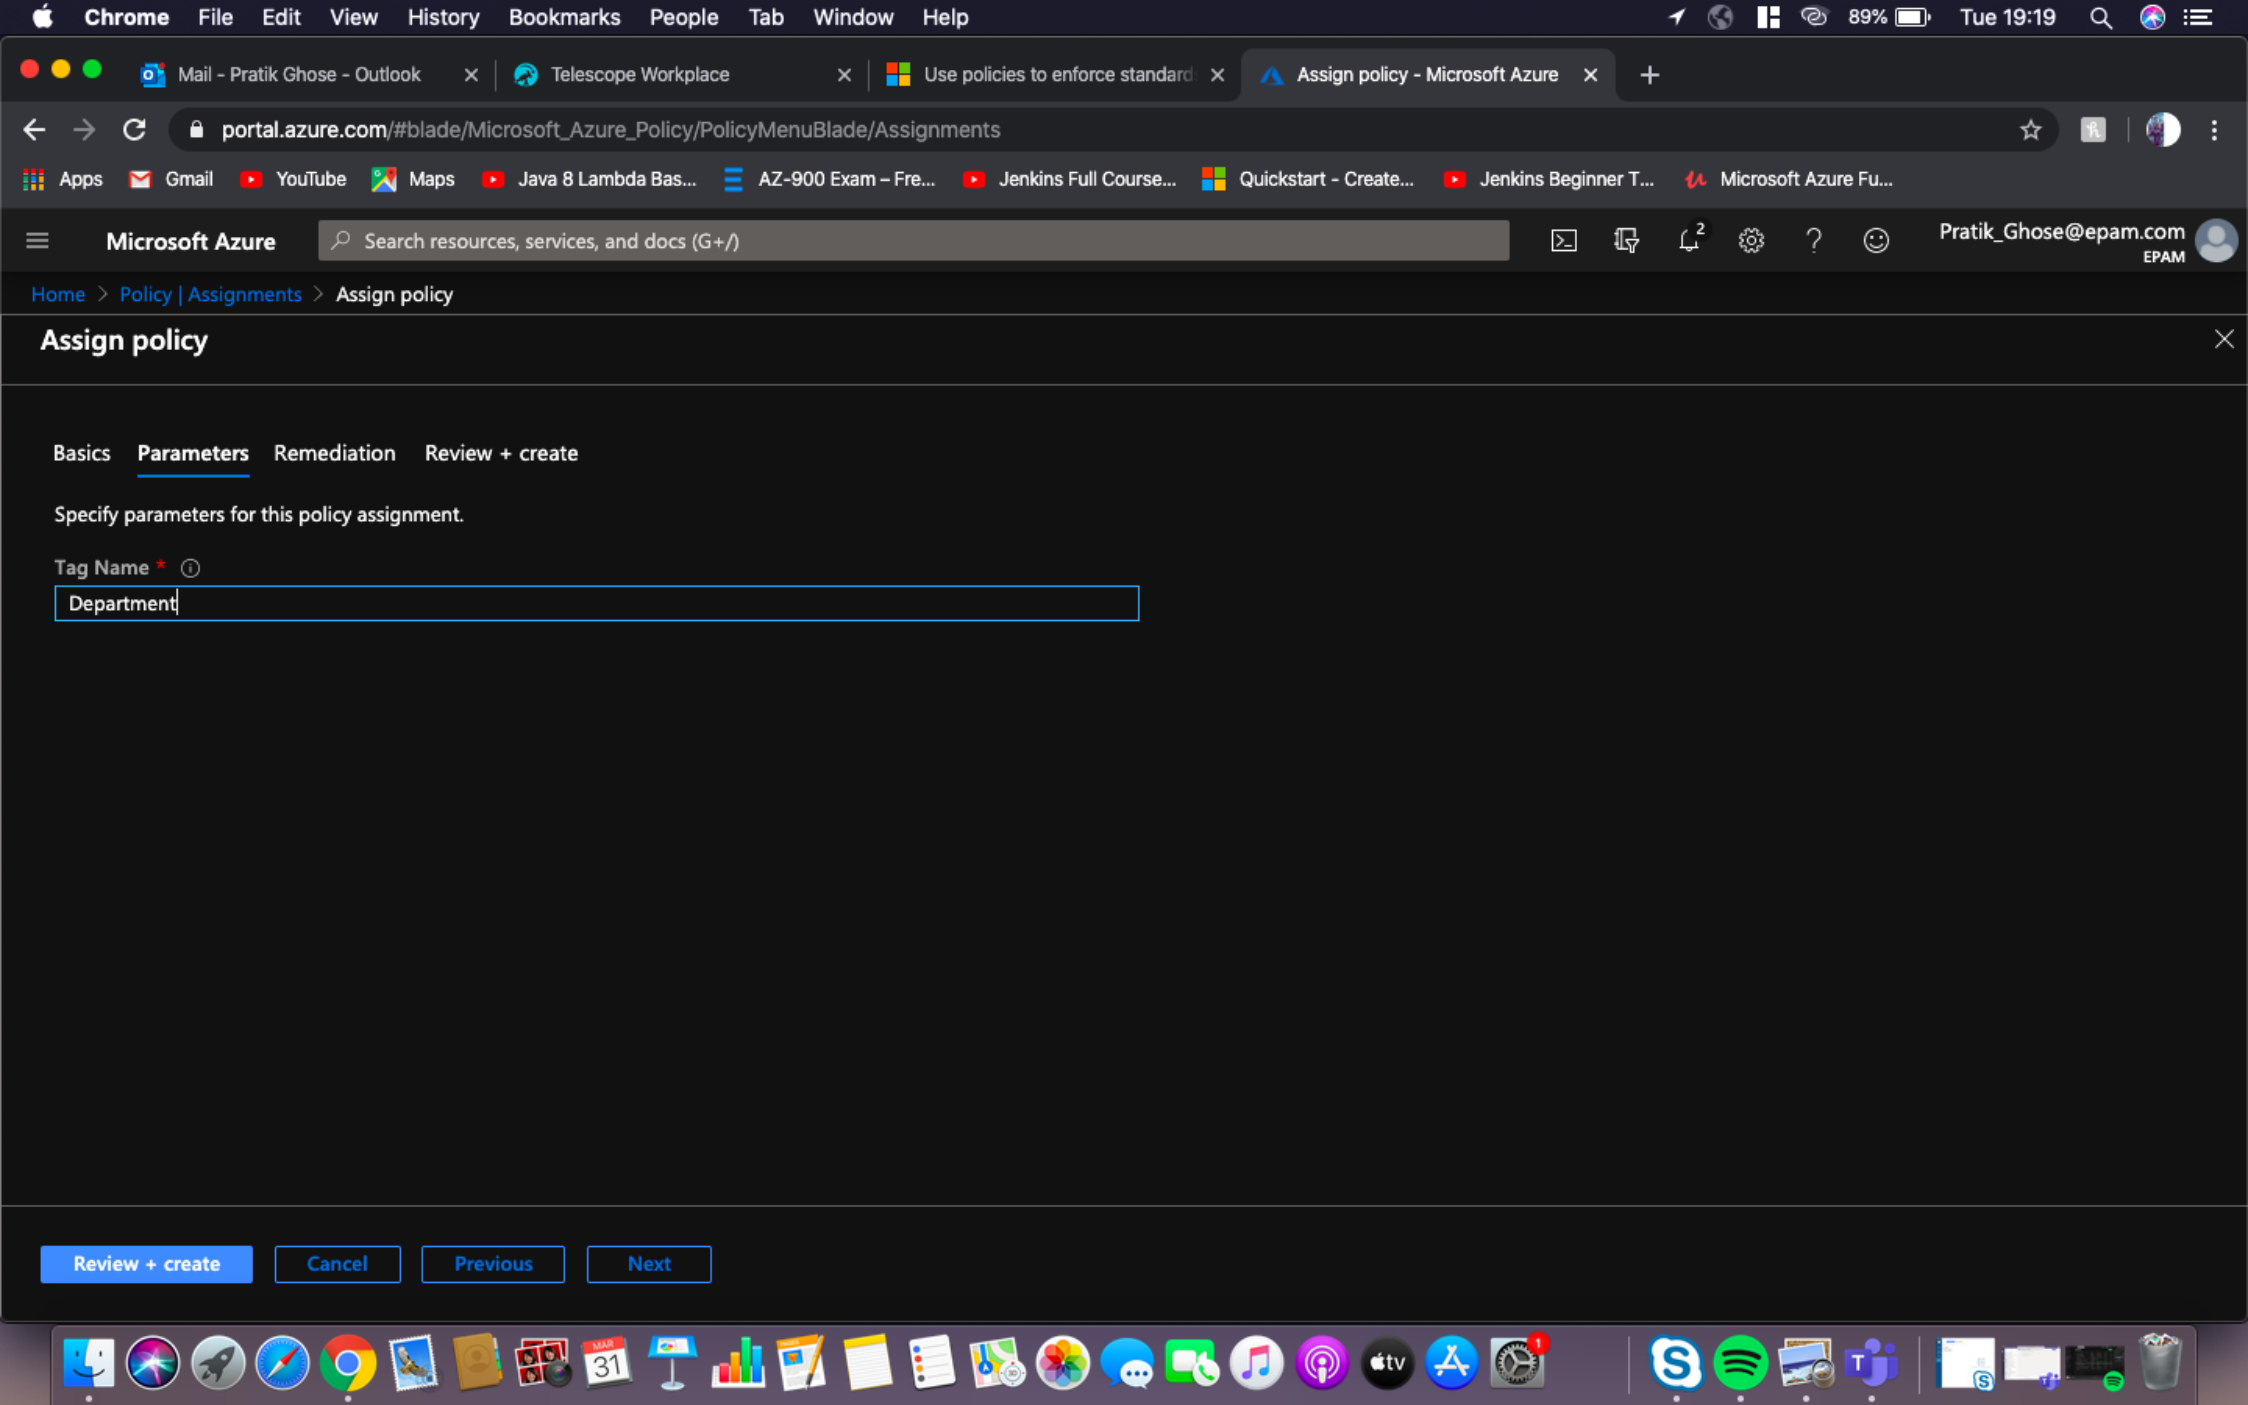

Inherit a tag from the subscription if missing

Built-in

Adds the specified tag with its value from the containing subscription when any resource missing this tag is created or updated. Existing resources can be remediated by triggering a remediation task. If the tag exists with a different value it will not be changed.
